SIGNAL

Product news, data engineering and field notes from the Cobalt team — once a month, no fluff.

PRODUCT LAUNCH

Introducing Pulse: real-time anomaly detection, built in

Pulse watches every metric you ship and surfaces the anomalies that matter — no thresholds to tune, no dashboards to babysit. We trained it on two years of production signals. Here is how it works, and how to switch it on today.

ENGINEERING

How we cut p99 query latency by 63%

A deep dive into the columnar storage rewrite behind our June release — what broke, what we measured, and the three changes that moved the needle most.

MARCUS LINDQVIST · 7 MIN

CUSTOMER STORY

Brightline cut incident response from hours to minutes

The payments team replaced four dashboards and a wall of alerts with a single Cobalt workspace. Here is the before-and-after, in their own words.

COMMUNITY

Recap: Cobalt User Group, Amsterdam

120 engineers, eight lightning talks and a lot of strong coffee. The slides, the demos and the date for the next meet-up are all inside.

PRIYA NAIR · 4 MIN

LIVE WORKSHOP

Scaling observability without scaling your bill

Join our staff engineers for a hands-on session on cardinality, sampling and retention — and how to keep costs flat as you grow.

Thursday, 16 July 2026 · 18:00 CET · Online

Free to attend · Limited to 200 seats · Recording sent to all registrants

In other news

1. Cobalt is now SOC 2 Type II certified — report available on request.
2. New: two-way sync with Slack and PagerDuty, plus a redesigned alert timeline.
3. We are hiring — six roles open across Berlin and fully remote.
4. Changelog: 41 improvements and fixes shipped in June.

> *Cobalt is the first monitoring tool our on-call engineers actually want to open. Mean time to resolution dropped by half in our first quarter.*
